

Corsodyl Mouthwash

Uses

Inhibits the formation of dental plaque. Helps to treat and prevent gingivitis and maintain oral hygiene, particularly in situations where toothbrushing cannot be adequately employed (e.g. following oral surgery or in disabled patients). Also for use post-periodontal surgery and to promote gingival healing. Useful in the management of mouth ulcers and oral candidal infections (e.g. denture stomatitis and thrush). Available in Original, Mint and Alcohol-Free Mint options.

Dosage

Adults: thoroughly rinse the mouth for about 1 minute with 10ml twice daily. For gingivitis, use for 1 month. For mouth ulcers and oral candidal infections, use for 48 hours after the infection has cleared. Children: should only be used on the advice of a medical professional.

Format and Ingredients

Liquid containing:
Chlorhexidine Digluconate 0.2% w/v,
