

Oraldene

Uses

For use in minor mouth infections including thrush, as an aid in the prevention and treatment of gingivitis, and in the management of sore throat and recurrent aphthous ulcers. Also of value before and after dental surgery, and to alleviate halitosis.

Dosage

Adults and children 12 years and over: rinse the mouth or gargle with at least 15ml of undiluted solution 2-3 times a day. Do not swallow. Under 12 years: not recommended.
